

## Family Youth Researcher Education

A set of interactive online trainings and tools to prepare youth, caregivers, and researchers to conduct partnership-based research together.

This training is made up of 3 units.

Unit 1 provides an introduction to partnership-based research. It helps teens and parents understand how they can contribute to research.

Unit 2 describes the research process and how teens and parents can help develop research questions, decide how a study should be done, collect information from study participants, and share study results.

Unit 3 focuses on skills and strategies that research partners need to work well together. It shows how research partners should communicate, show respect and appreciation to each other, and make decisions and solve problems together.

1

INTRODUCTION TO  
PARTNERSHIP BASED  
RESEARCH

2

HOW RESEARCH IS  
DONE

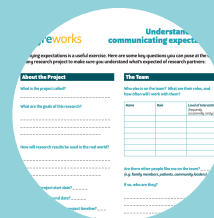

3

HOW STRONG  
PARTNERSHIPS WORK

### Multimodal learning activities

Video, audio drama, interactive exercises

### Printable worksheets & resources

Facilitate the research process & communication

### Customizable Modules

Develop modules that meet your specific needs

FYREworks provides practical “how-to” training and resources that empower and prepare teens and parents to make meaningful contributions to research.

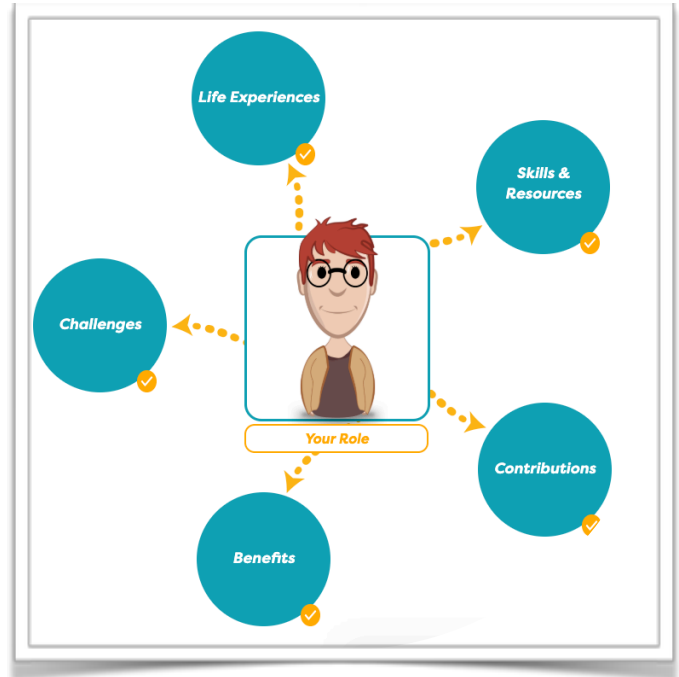

## Learning Objectives:

Teens and parents who complete FYREworks will:

- Develop an understanding of what partnership-based research is and how it works.
- Develop the confidence and skills they need to contribute to partnership-based research.

91% of parents and 83% of teens indicated that FYREworks helped prepare them to contribute to research.

Nearly all participants said they would recommend the training to other teens or parents/caregivers.

**Ask us about customized modules to meet your specific research needs.**
